Good morning Professor Cantwell,

Please pardon the interruption; I feel bad about being a surprise service request.

I realize I didn't give a lot of context to Professor Brint. In case it's helpful background I can share a little information on our course. My professor is interested in replicability of quantitative methods and I believe is helping us get socialized into an ideal of community data. He's also given us the opportunity to work in areas of interest for us, and I'm hoping that this might guide my use of UCUES/SERU data in my project.

I believe that I'll be able to get access to the UCUES data. If you have time, I'd be grateful for your advice on where to obtain any other datasets you all used. If there's any analysis code at all you would be in a position to share, I'd also be grateful.

Sincerely,

Jay Colond

Hello Jay,

The paper was published and can be accessed on my project website: www.highered2000.ucr.edu on the publications page under "reforming undergraduate education".

I believe my former colleague Allison M. Cantwell developed the coding.

I do not have the analysis code and original data, but she may.

She's at Colorado State now. I am copying her on this email.

Good luck!
Steve Brint

Subject: 2012 Portrait of the Disengaged study

Good evening Professor Brint,

I'm a first-year sociology graduate student at the University of California - Merced. For class, our statistics professor has asked we interpret and build on existing quantitative studies in our areas of interest. I'm interested in characterizing the experience of undergraduates by Asian ethnicity.

Specifically, he's asked that we learn how to best replicate and modify analyses and code. (We're studying Stata, Jupyter, and potentially R).

In researching UCUES work, I read your Portrait of the Disengaged. I'm curious about how you used UCUES to operationalize student disengagement, technically. I realize it's been a number of years, but might it be possible to get a copy of your analysis code and original data?

Sincerely,

Jay Colond
